

COOLING IT DOWN FOR AN ENERGY GIANT ...

Reliant Energy is one of the nation's largest independent power producers. Their 521-megawatt power plant is the largest waste coal fired plant in the world - and the only merchant plant of its kind in the U.S. using clean-coal technology.

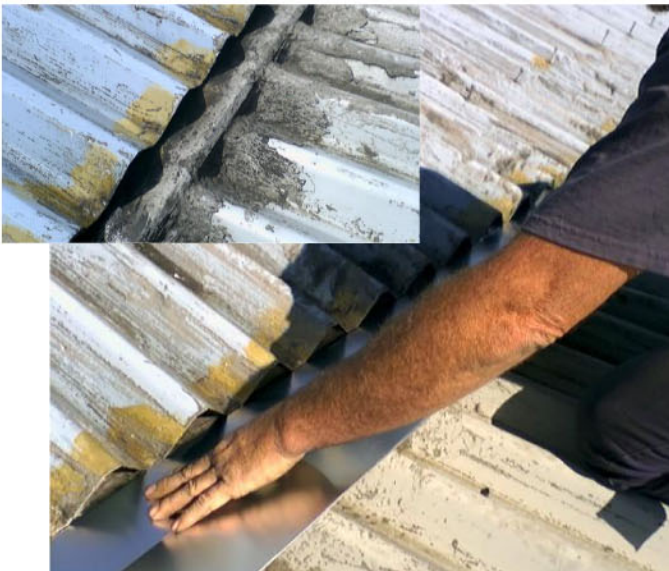

Original metal of the original Reliant roof.

After the cool protective Topps Seal™.

After considering all the roofing options available to them, Topps Seal™ was selected for its ability to solve maintenance problems while simultaneously providing maximum cooling to this non air-conditioned

maintenance and warehouse facility. Immediate savings were estimated to be 2/3 over the cost of replacement, in addition to yielding the benefits of a cooler building.

Power cleaned roof meets Topps Seal rubber.

Temperatures on a roof like this can drop as much as 40° F. immediately after cool white Topps Seal™ rubber is installed.
